

Safety and Shut-off Block

SAF/DSV

1. DESCRIPTION

1.1. GENERAL

The HYDAC safety and shut-off block is used to shut off and discharge hydraulic accumulators or user units. It complies with the relevant safety standards in accordance with DIN EN 982 and the German industrial safety regulations, BetrSichV.

1.1.1 Key to circuit diagram

- ① Safety valve to prevent excess pressure to PED 97/23/EC

The Hydac pressure relief valve DB12 is used on the SAF series. This is a direct-operated pressure relief valve in seat valve construction with excellent opening and closing properties. This version of DB 12 valve conforms to the requirements of the Pressure Equipment Directive 97/23/EC with CE marking.

- ② Pressure gauge
 ③ Shut-off valve
 ④ Pressure release valve
 ⑤ Connection for test gauge

These devices are combined in a compact, space-saving HYDAC safety and shut-off block. The following devices are also available:

- ⑥ Solenoid-operated pressure release valve.
 ⑦ Throttle

1.1.2 Product benefits

The compact combination of elements considerably simplifies the connection of an accumulator or user unit to the hydraulic system and provides the following advantages:

- Minimum of space, maintenance and installation required. As all the individual units are combined in one block, considerably fewer pipe fittings are necessary for installation.
- Considerable reduction in installation time
- All types of connections for all accumulator systems and makes are available - imperial and metric connections as well as manifold mounted and weld nipple connections.
- Additional valves such as pilot-operated check valves, flow control valves and combined flow control and check valves can be fitted to the system connection P.

Circuit diagram

DB 12 CE p-Q graph, see ① above

This valve cannot be set to values in the shaded area.

1.2. CONSTRUCTION

The SAF safety and shut-off block consists of a valve block, a built-in HYDAC pressure relief valve, a main shut-off valve and a manually operated pressure release valve, and the necessary gauge connections are provided in addition to the tank connection. In addition an optional solenoid-operated 2-way directional valve allows automatic pressure relief of the accumulator or user unit and therefore of the hydraulic system in an emergency or during shut-down.

1.3. CONNECTIONS

The safety and shut-off block has the following connections:

- S – Accumulator connection
- P – Pipe connection (pump)
- T – Tank connection
- M1 – Test gauge connection
G ½ - ISO 228
(G ¼ for SAF 10)
- M2 – Gauge connection
G ¼ - ISO 228

1.4. TECHNICAL SPECIFICATIONS

1.4.1 Operating fluids

Mineral oil to DIN 51524
Part 1 and 2
(other fluids on request)

VISCOSITY RANGE

min. 10 mm²/s
max. 380 mm²/s

FILTRATION

Max. permissible contamination level of the operating fluid to NAS 1638 class 10.

We therefore recommend a filter with a minimum retention rate of $\beta_{20} \geq 100$.

The fitting of filters and regular replacement of filter elements guarantees correct operation, reduces wear and tear and extends the service life.

1.4.2 Permissible working temperature

-10 °C to +80 °C
(ambient temperature on "E"
version limited to
-10 °C to +40 °C)

1.4.3 Max. operating pressure

400 bar

1.4.4 Model with solenoid-operated pressure relief

TYPE OF OPERATION

Solenoid-operated by means of pressure-tight, oil-immersed, single stroke solenoids in accordance with VDE 0580.

Actuating solenoid with plug to DIN 43650, standard for general industrial applications, available for 24 V DC and 230 V AC.

TYPE OF VOLTAGE

DC solenoid

When connected to AC voltage, the necessary DC voltage is produced by means of a bridge rectifier connector.

VOLTAGE TOLERANCE

-5 % to +10 %

NOMINAL CURRENT

Depending on the nominal voltage

24 V DC 1.04 A

230 V AC 0.13 A

POWER CONSUMPTION

$p_{20} = 26 \text{ W}$

SWITCH-ON TIME

100 % = continuous operation

SWITCHING TIME

Depending on symbol, pressure across the individual ports and flow rate,

switch-on time = approx. 25 ms,

switch-off time = approx. 35 ms

1.5. STANDARD MODELS

1.5.1 Model with manually operated pressure release valve

The basic model Safety and Shut-off Block has a manually operated pressure release valve, code "M", and a direct-operated pressure relief valve.

Sizes: SAF 10 M
SAF 20 M
SAF 32 M

1.5.2 Model with solenoid-operated pressure relief

The "E" model Safety and Shut-off Block contains a solenoid-operated 2-way directional valve (open when de-energised) (standard) for automatic pressure relief of the accumulator and the hydraulic system.

Sizes: SAF 10 E
SAF 20 E
SAF 32 E

1.6. Δp -Q GRAPHS FOR SAF
with DB 12 pressure relief valve

1.6.1 Flow from the pump to the accumulator

1.6.2 Flow from the accumulator via the solenoid-operated pressure release valve to the tank

1.6.3 Flow from the accumulator via the pressure release valve to the tank

measured at:
 $v = 32 \text{ mm}^2/\text{s}$
 $t_{oil} = 40 \text{ }^\circ\text{C}$
 operating pressure = 400 bar

2. MODEL CODE FOR SAF

(also order example)

SAF 20 E 1 2 Y 1 T 210 A -S 13 -LPI

Safety and shut-off block

Series SAF

Size of main shut-off valve

- 10 = DN 10
- 20 = DN 20
- 32 = DN 32

Discharge

- M = Manual discharge
- E = Solenoid-operated and manual discharge

Block material

- 1 = Carbon steel
- 2 = 1.4021 (stainless steel 304)
- 3 = 1.4571 (stainless steel 316)
- 7 = Other

Seal material (elastomer)

- 2 = NBR (Perbunan)
- 5 = EPDM
- 6 = FPM (Viton)
- 7 = Other

For solenoid-operated discharge with manual override

- Y = Open when de-energised (2-way directional valve 2SV5E2Y)
- Z = Closed when de-energised (2-way directional valve 2SV5E2Z)

Type of voltage – seat valve

- 1 = 24 V DC
- 2 = 110 - 115 V AC
- 3 = 220 - 230 V AC
- 6 = 120 V AC
- 7 = Other

Pressure relief valve

- T... = Pressure-set and lead-sealed by TÜV
- N... = Adjustable using Allen key 1)

Pressure setting

e.g. 210 bar

Threaded connections to

- A = ISO 228 (BSP)
- B = DIN 13, to ISO 965/1 (metric)¹⁾
- C = ANSI B1.1 (UNF, O-ring seal to SAE)¹⁾
without M2-gauge connection

Adaptor

to accumulator (see point 6.1.)
e.g. S13 = ISO 228 - G 2A

Additional equipment (see Point 7.3)

- L = lockable main shut-off valve (for use with padlock)
- LPI = model L with additional position monitoring (inductive proximity switch)
- LPM = model L with additional position monitoring (mechanical limit switch)

Accessories

(When ordering please give full details) e.g. Shut-off valve for pressure gauges
(see point 6.2.)

¹⁾ on request

5. DESCRIPTION OF DSV 10

5.1. GENERAL

DSV 10 as a low cost alternative to the SAF 10

The 3-way safety block DSV 10 is used to shut off and discharge hydraulic accumulators or user units. It complies with relevant safety standards in accordance with DIN EN 982 and the German industrial safety regulations, BetrSichV.

The HYDAC pressure relief valve DB 12 is used with the DSV series. This is a direct-operated pressure relief valve in seat valve construction with excellent opening and closing characteristics.

This version of DB 12 complies with the requirements of the Pressure Equipment Directive 97/23/EC with CE marking.

There are four different models:

- DSV 10 M
Manual discharge
Standard L-ball
- DSV 10 M - T-ball
Manual discharge
T-ball, accumulator drain
- DSV 10 EY
Manual / solenoid-operated
discharge
Open when de-energised
- DSV 10 EZ
Manual / solenoid-operated
discharge
Closed when de-energised

The essential difference compared to the SAF10 lies in the shut-off and discharge function of the DSV10. On request we can supply other models to cover nearly all applications, e.g. for aggressive media.

On request we can supply test certificates to EN 10204 and quality test certificates to DIN 55350, Part 18.

5.2. CONSTRUCTION

The DSV 3-way safety block consists of a valve block with a built-in Hydac pressure relief valve and a shut-off valve. It has ports for the pump, pressure gauge, tank and accumulator. In addition an optional solenoid-operated 2-way directional valve allows automatic discharge of the accumulator or user unit.

5.3. PORTS

The DSV has the following ports:

- S - Accumulator port
(M33x2 DIN 3852 Part 3)
- P - Inline port
(G 3/8 and G 1/2)
- T - Tank port
(G 1/4)
- M - Pressure gauge port
(G 1/4)

5.4. FUNCTION

When the accumulator is in operation the change-over ball valve connects the pump port with the accumulator. At the same time the accumulator is monitored for pressure via the built-in pressure relief valve.

By switching over the ball valve, the pump port is shut off leakage-free on the inlet side and the accumulator is discharged simultaneously to the tank.

During switching all three ports (P, S and T) are momentarily interconnected (negative switching overlap). If a solenoid-operated 2-way directional seat valve is fitted, automatic discharge is possible (e.g. in the event of a power failure or shut-down).

5.5. NOTES

Ball valves are not designed to be used as flow control valves; therefore they should always be either fully open or fully closed, to avoid damaging the sealing cups.

To ensure correct functioning, pressure and temperature specifications must be observed.

5.6. TECHNICAL SPECIFICATIONS

5.6.1 Symbols

5.6.2 Type of construction

Ball valve isolating device

Pressure relief valve is direct-operated as a cone seat valve

Seat valve is pilot-operated

5.6.3 Materials

6.2 SHUT-OFF VALVE FOR PRESSURE GAUGES

Consisting of shut-off valve AG (stock no. 611 903) with vent screw, swivel nut, thread and test connection to DIN 16271 as well as adaptor PA with seals (stock no. 370754).

7. SPECIAL MODELS

7.1. TYPE SA 32 M (E) 28

with direct operated pressure relief valve size 30
(max. working pressure 315 bar)

Direct-operated pressure relief valve size 30

Two different models of the 2-way directional valve are available:

2SV5E2Y
(open when de-energised)

2SV5E2Z
(closed when de-energised)

Type	Weight
SA 32 M 28...	38 kg
SA 32 E 28...	39 kg

7.2 TYPE SA 32 M (E) 29
 with pilot-operated pressure relief valve
 (max. operating pressure 330 bar)

SA 3 2 E 2 9 T V Y

SA 3 2 E 2 9 T V

SA 3 2 M 2 9 T V Y

SA 3 2 M 2 9 T V

The safety and shut-off block SA32M(E)29 is equipped with a pilot-operated pressure relief valve (size 32) for high flow rates (up to 600 l/min).

The E version of the safety and shut-off block has a solenoid-operated 2-way directional valve for automatic pressure release of the accumulator and the hydraulic system in an emergency or during shut-down.

For unpressurised tank lines, valve type "TV" can be used (with internal oil return to tank).

For pressurised tank lines, valve type "TVY" is recommended (with external oil return to tank).

Two different models of the 2-way directional valve are available:

- 2SV5E2Y (open when de-energised)
- 2SV5E2Z (closed when de-energised)

Type	Weight
SA 32 M 29...	22.5 kg
SA 32 E 29...	23.5 kg

7.3. SAFETY AND SHUT-OFF BLOCK WITH ADDITIONAL EQUIPMENT

Safety and shut-off blocks are available with a device to enable the shut-off valve to be locked in either the open or closed position, by fitting a padlock.

It is also possible to fit inductive proximity switches or roller-actuated limit switches to control the open and closed position of the shut-off valve.

7.3.1 Additional device LPI

7.3.2 Additional device LPM

7.4. SAFETY AND SHUT-OFF BLOCK FOR HIGH FLOW RATE

The basic design of the shut-off block is the same as the standard model.

Technical specifications:

Type: SA50M60T...

Size: DN 50

Max. working pressure: 315 bar

Direct-operated pressure relief valve size 30

7.5. SAFETY AND SHUT-OFF BLOCK FOR FRONT PANEL MOUNTING

The safety and shut-off block consists of a valve block, a built-in pressure relief valve, a main shut-off valve and a manually operated pressure release valve.

This block is mounted on a front panel with 3 M8 screws. Ports "P" and "T" are situated on the mounting side.

Advantages:

The compact design means that the block occupies a minimum of space and ensures minimum maintenance.

Technical specifications:

Type: SA 6M10T...

Size: DN 10

Max. working pressure: 350 bar

Direct-operated pressure relief valve size 6

7.6. SAFETY AND SHUT-OFF BLOCK WITH 2-WAY CARTRIDGE VALVE (LOGIC ELEMENT OR LOGISTOR)

This safety and shut-off block consists of a valve block, a built-in pressure relief valve and a solenoid-operated 2-way cartridge valve which replaces the main shut-off valve.

Advantages:

In addition to its compact construction, this model is capable of rapid switching to control the oil flow.

7.6.1 Function when using 4/2 directional valve

When the 4/2 directional valve is in the switching position shown (open when de-energised), the spring chamber of the logic element is pressurised via the accumulator pressure; the path from P to S is blocked and the hydraulic accumulator is automatically shut-off from the system. By connecting the accumulator via the slip-in orifice in the pilot valve to the tank, it will slowly discharge.

When the 4/2 directional valve is in the crossed-over switching position (energised), the spring chamber of the logic element is discharged, the path from P to S is opened and the accumulator is charged.

Technical specifications:

Type	Size	max. operating pressure	Pressure relief valve
SA20A50T...	DN 20	400 bar	size 20
SA32A50T...	DN 30	315 bar	size 30
SA40A50T...	DN 40	315 bar	size 30

7.6.2 Function when using 3/2 directional seat valve

When the 3/2 directional seat valve is in the switching position shown (open when de-energised), the spring chamber of the logic element is pressurised via the system pressure; the path from P to S is blocked and the accumulator is shut-off from the system. When the 3/2 directional seat valve is in the discharge position (energised) the spring chamber of the logic element is discharged, the path from P to S is open and the accumulator is charged.

If the pump breaks down or if it is switched off, the 3/2 directional seat valve reverts to the "open when de-energised" position; the accumulator pressure shuts off the logic element via the shuttle change-over valve and shuts off the accumulator from the system.

Technical specifications:

Type	Size	max. operating pressure	Pressure relief valve
SA20A51T...	DN 20	400 bar	size 20
SA32A51T...	DN 30	315 bar	size 30
SA40A51T...	DN 40	315 bar	size 30

8. NOTE

The information in this brochure relates to the operating conditions and applications described. For applications or operating conditions not described, please contact the relevant technical department. Subject to technical modifications.
